ENVIRONMENTAL POLICY

ICAIPLAST SPA

1. ENVIRONMENTAL POLICY

ICAIPLAST SPA as a leading player in the production of synthetic leather or PVC and PU coated fabrics believes and joins to the principles for a sustainable development of its business, promoting but limiting the necessary energy consumption of renewable sources and trying to minimize the use of non-renewable ones. The company's use of energy resources is attributed to the minimization of environmental impact, meeting the real needs and avoiding waste.

In pursuit of its objective, ICAIPLAST SPA research technological and development solutions that can be compatible with the environment, considering it a valuable source and to be respected.

In order to guarantee a future for the next generations and try to reduce climate change, ICAIPLAST SPA is committed to waste management, energy saving, less production of air pollution, in the prevention of environmental hazards thanks to the help of a certified management system.

The evaluation and monitoring of environmental indicators, compliance with legislation, combined with the commitment of workers and management, ensure that this company can set short and long term goals for continuous improvement in environmental and ethical.

These premises make possible the commitment of ICAIPLAST SPA in a strategy that matches at the same time people, products, production processes and suppliers, making training and information on environmental issues of fundamental importance.

2. ISO 14001

To guarantee the interest in the environment and the commitment to sustainable growth, ICAIPLAST SPA has opted for the use of an environmental management system according to ISO 14001 certification. This management system contributes to corporate sustainability through improved performance, compliance with regulatory requirements of objectives.

3. DECLARATION OF COMMITMENT

According to the above, ICAIPLAST SPA declares its commitment and responsibility to:

- comply with all applicable laws and regulations laid down by the legislator;
 - work according to safety and responsibility systems with the goal of not damaging the environment surrounding the company, and not causing conditions of danger to the health of employees and local communities;
 - continuously adapt its plants and processes to the safest, most modern and effective technologies to reduce the environmental impact, promoting sustainable development, the responsible use of natural resources and energy saving in every operation;
 - inform the staff about the Environmental Management System, promoting at every level a sense of responsibility for the environment and providing support and adequate information to customers and suppliers;
 - ensure accurate training of all staff in order to provide the necessary knowledge to avoid or manage environmental incidents in the most correct manner and to work with the utmost accuracy by applying a prevention activity;
 - improve the techniques and production plan by using increasingly "clean" ingredients and reducing waste and consumption to prevent pollution, including recycling of products according to specific and measurable reduction targets and the use of raw materials from renewable sources;
 - periodically review projects, systems and objectives. Carry out a regular verification activity, including through the examination of reports of environmental non-compliance received by all employees, in order to monitor the processes and plans of environmental management, health and safety, identifying any actions necessary for correction, or prevention of problems;
 - make available to its staff, to the communities, the information necessary to understand the effects on the environment of the activities of the company, by documenting the activities and pursuing an open dialogue;
 - ensure cooperation with public authorities;
-
